How to clean and store tools and equipment

Clean your kitchen utensils in hot water with an antibacterial detergent.When sanitizing kitchen tools and equipment, use either boiling water or a solution of bleach and water.Store your tools in a regularly cleaned plastic or metal box to keep the germs away.If you don't clean your kitchen properly, germs and bacteria can start to grow – and quickly, too! This definitely isn't ideal in a place where you prepare and cook food as it can lead to the people who visit your business getting ill. To avoid this, it's important you're cleaning and sanitizing kitchen utensils properly after you use them.When cleaning and sanitizing kitchen utensils, remember to dry them with dishcloths that have been cleaned using a quality detergent, such as Sunlight Liquid Detergent.After you've finished cooking, it's vital you're cleaning and sanitizing kitchen tools and equipment to prevent the spread of bacteria. To start with, here's how you can clean your tools:Scrape any food debris into a bin before cleaning and sanitizing tools and equipment.Fill your sink with warm to hot water and an antibacterial detergent.Use a clean sponge or brush to scrub each item thoroughly, making sure to remove all bits of food and getting into all the little, hard-to-reach areas.Either leave to air dry or use a dish cloth, which should be cleaned with a quality detergent, such as, to ensure you're properly cleaning and sanitizing kitchen tools and equipment.The PollWhat topics would you like to read about?0 VotesIf you need to be thoroughly sanitizing kitchen tools and equipment to ensure there's no chance of any bacteria, follow these steps:Put your utensils in a large pan, covering them fully in water. Carefully bring the water to the boil, putting a lid on the pan, for 5 minutes. Remove the lid and wait for the water to stop boiling before removing the utensils with prongs.Another method for cleaning and sanitizing kitchen utensils is to combine a tablespoon of bleach with a gallon of water, leaving your tools to soak before rinsing them thoroughly with hot water.If you're wondering how to clean and store cooking tools and equipment, clean using one of the above methods, before moving onto storing. Use a sanitized container, such as a large plastic or metal box, and place only the cleaned tools in it. Clean the box regularly to keep germs and bacteria at bay.Cleaning and sanitizing tools and equipment is vital to keeping a healthy and happy kitchen for your business – and it's not hard, either! Just remember that it's not just about cleaning, but also about drying and storing your utensils too. Follow all of the tips above and you'll banish bad bacteria.Originally published July 27, 2021 Your farm equipment is one of the largest investments on your farm. Keeping your farm tools regularly maintained and properly stored are the best ways to ensure that they last you for a good, long time. Read on to learn how to store your equipment during the off-season.Determine Your Seasonal RotationTo keep track of which equipment should be stored at what time, determine your seasonal rotation. You may want to have a written chart or delegation checklist to keep your team up-to-date with equipment maintenance and storage schedules.Not only will a seasonal rotation ensure that your equipment is stored at the proper time, but it'll also keep you engaged with which pieces will need to come out of storage at different points during the year. This will save you time when it comes to preparing for different seasonal needs. For example, if you have your snow gear ready to go at the beginning of November, you won't end up dealing with a snowstorm before you've prepared the equipment you need to plow out with.Clean Your EquipmentBefore you store your farm equipment, give it a good cleaning. In addition to washing the exterior of each piece, take the time to do a deep cleaning. With the equipment turned off, get into exposed gears and belts to clear debris and ensure overall cleanliness and functionality. To help protect the finish, you may even want to consider waxing the vehicles paint, which can help the paint last longer and serve as a rust inhibitor.Stay Up-to-Date With MaintenanceAfter you give your equipment a thorough cleaning, make sure each piece is up-to-date on its regular maintenance. This includes checking fluid levels and tire pressure as well as making any necessary repairs. Don't put off until next season what you can do now. When you put your equipment away in good working order, you'll have a smooth time pulling it out and putting it to work next season.Top Off FluidsWhile you're under the hood and in any other gearboxes, top off fluid levels so that they're ready to go the next time you are. This is also a good way to check for leaks. If the fluid levels are down when you take the equipment out to use, you can see if there is less fluid in the reservoirs. Lubricate gears and joints to ensure smooth motion and stave off cold-related breaks that might occur during the winter.Ensure Storage Facility SecurityOnce your equipment is stored in the shed, barn or other facility, make sure that your storage unit is secure to keep your equipment safe from intruders and the elements. Your facility should be reasonably weatherproof to keep snow and ice from accumulating around the equipment. You should also keep your facility locked and accessible only to family or farm staff who need to access or maintain the equipment. Improper care can lead to decreased efficiency, diminished quality of work, and a host of other consequences that ultimately result in lost revenue. This article focuses mainly on the maintenance of lineman, construction, and plumbing tools. Keep reading to learn our 5 handy tips to maintain your tools! 1) Find Proper Storage A well-organized and maintained tool storage system is a must. It will keep your tools in good condition and make them easy to find, but it can also add to your work area's overall appearance and organization. Invest in quality storage containers and organizers. This investment will help you keep your work tools sorted and easy to find. Keep your work tools in an accessible place. When you need to use them, you won't have to go on a mystery hunt and waste time searching for them. When storing your tools, always keep them off the floor. There are several tool storage system options: bags, drawers, chests, and pegboards. A helpful way to store small tools is with a shelf. You could also consider hanging up a pegboard. These are perfect for hanging tools like a lineman socket wrench, tight fit wrench, or adjustable angle wrench. That way, your tools are easier to locate and access. If you're able to, store your power tools in their designated case or original packaging. You can also place silica gel packs in your toolboxes to capture excess moisture to avoid corrosion. Anti-rust and corrosion liners are the best way to protect your tools if you decide to use tool chests. Add them to your drawers or tool chests for enhanced protection. You can also store power tools safely in your garage with a pegboard. 2) Clean Your Tools The best way to store your tools is to clean them after each use. If you don't maintain your tools, they will accumulate dust, dirt, and grease. Also, they won't be as effective when you need to use them the next time. Ensure that your tools are free of grease and oil before storing them. It helps maintain their condition and prolong their lifespan. Hand Tools Clean them as soon as possible: the longer dirt stays on, the harder it is to clean. Start by removing any dirt collected during use with a brush or a cloth. Use a brush or other soft cleaning implement to get into all the tight spaces. Next, use mild soap and water. Be sure not to use harsh chemicals, as they can be dangerous and make them unsafe to use. Finally, maintain your tools by rinsing with clean water and drying off. Clean rusty industrial crank handles by brushing with a brush dipped in cleaning fluid. Afterward, you can wipe your tools with a dry cloth. Power Tools Unplug and disconnect power tools, vacuum off any dust that is easily accessible, then use compressed air to get rid of any dirt and debris in the vents. Clean rusted tools as soon as possible by using a stiff brush with light pressure, so you don't scratch the metal's surface. Spray on a corrosion protector to decrease the rust rate of your tools. Clean all the knobs and gauges for everything to be in perfect condition. Finally, make sure you inspect and lubricate any power tool parts that need lubrication. The Best Pipeline & Lineman Tools Since 1869 Lowell Corporation offers the best hand tools in the oil drilling industry. Whether you need a lineman socket wrench, tight fit wrench, or adjustable angle wrench, you'll want the right balance between cost and efficiency. Our custom-made lineman tools make tough jobs easier for utility work across the country. We've been increasing productivity in construction, maintenance, and manufacturing operations since 1869. With our essential pipeline and construction hand tools, you get the backing of the most trusted name in the hand tool industry. Above all, Lowell Corporation is proud to manufacture all of its pipeline tools right here in the USA in the heart of New England. All Lowell wrenches are 100% guaranteed with our one-year manufacturer warranty against defects in material and craft for one year from delivery. Ask about our custom standard keyway sizes, standard keyway dimensions, and standard keyway tolerances. Make sure to follow us on Instagram for exciting product updates and promotions!
